

USX8-11W

2.4m | 8ft Sentinel® Ultra High Performance, Super High XPD Antenna, dual-polarized, 10.000 – 11.700 GHz

Product Classification

Product Type Microwave antenna

General Specifications

Antenna Type USX - Sentinel® Ultra High Performance, Super High XPD Antenna, dual-polarized

Polarization Dual

Side Struts, Included 1

Side Struts, Optional 4

Dimensions

Diameter, nominal 2.4 m | 8 ft

Electrical Specifications

Operating Frequency Band 10.000 – 11.700 GHz

Gain, Low Band 45.4 dBi

Gain, Mid Band 46 dBi

Gain, Top Band 46.6 dBi

Boresite Cross Polarization Discrimination (XPD) 40 dB

Front-to-Back Ratio 80 dB

Beamwidth, Horizontal 0.9 °

Beamwidth, Vertical 0.9 °

Return Loss 26 dB

VSWR 1.1

Radiation Pattern Envelope Reference (RPE) 7398

Electrical Compliance ACMA FX03_10a | ACMA FX03_11a | ETSI 302 217 Class 4 | US FCC Part 105A | US FCC Part 107A

Cross Polarization Discrimination (XPD) Electrical Compliance ETSI EN 302217 XPD Category 3

USX8-11W

Mechanical Specifications

Compatible Mounting Pipe Diameter	115 mm 4.5 in
Fine Azimuth Adjustment Range	±5°
Fine Elevation Adjustment Range	±5°
Wind Speed, operational	201 km/h 124.896 mph
Wind Speed, survival	200 km/h 124.274 mph

USX8-11W

Antenna Dimensions and Mounting Information

USX8

Dimensions in inches (mm)								
Antenna size, ft (m)	A	B	C	D1	D2	E	F	G
8 (2.4)	95.1 (2416)	8.0 (203)	22.5 (572)	14.1 (357)	23.6 (600)	51.1 (1298)	12.1 (306)	10.3 (262)

Wind Forces at Wind Velocity Survival Rating

Axial Force (FA)	10599 N 2,382.751 lbf
Angle α for MT Max	-140 °
Side Force (FS)	6268 N 1,409.103 lbf
Twisting Moment (MT)	-7647 N-m -67,681.656 in lb
Force on Inboard Strut Side	11263 N 2,532.024 lbf
Zcg without Ice	624 mm 24.567 in
Zcg with 1/2 in (12 mm) Radial Ice	765 mm 30.118 in
Weight with 1/2 in (12 mm) Radial Ice	364 kg 802.482 lb

Regulatory Compliance/Certifications

Agency

ISO 9001:2015

Classification

Designed, manufactured and/or distributed under this quality management system

* Footnotes

Operating Frequency Band

Bands correspond with CCIR recommendations or common

USX8-11W

Gain, Mid Band

allocations used throughout the world. Other ranges can be accommodated on special order.

For a given frequency band, gain is primarily a function of antenna size. The gain of Andrew antennas is determined by either gain by comparison or by computer integration of the measured antenna patterns.

Boresite Cross Polarization Discrimination (XPD)

The difference between the peak of the co-polarized main beam and the maximum cross-polarized signal over an angle twice the 3 dB beamwidth of the co-polarized main beam.

Front-to-Back Ratio

Denotes highest radiation relative to the main beam, at $180^\circ \pm 40^\circ$, across the band. Production antennas do not exceed rated values by more than 2 dB unless stated otherwise.

Return Loss

The figure that indicates the proportion of radio waves incident upon the antenna that are rejected as a ratio of those that are accepted.

VSWR

Maximum; is the guaranteed Peak Voltage-Standing-Wave-Ratio within the operating band.

Radiation Pattern Envelope Reference (RPE)

Radiation patterns define an antenna's ability to discriminate against unwanted signals. Under still dry conditions, production antennas will not have any peak exceeding the current RPE by more than 3dB, maintaining an angular accuracy of $\pm 1^\circ$ throughout

Cross Polarization Discrimination (XPD) Electrical Compliance

The difference between the peak of the co-polarized main beam and the maximum cross-polarized signal over an angle twice the 3 dB beamwidth of the co-polarized main beam.

Wind Speed, operational

For VHLP(X), SHP(X), HX and USX antennas, the wind speed where the maximum antenna deflection is 0.3 x the 3 dB beam width of the antenna. For other antennas, it is defined as a deflection is equal to or less than 0.1 degrees.

Wind Speed, survival

The maximum wind speed the antenna, including mounts and radomes, where applicable, will withstand without permanent deformation. Realignment may be required. This wind speed is applicable to antenna with the specified amount of radial ice.

Axial Force (FA)

Maximum forces exerted on a supporting structure as a result of wind from the most critical direction for this parameter. The individual maximums specified may not occur simultaneously. All forces are referenced to the mounting pipe.

Side Force (FS)

Maximum side force exerted on the mounting pipe as a

Twisting Moment (MT)

result of wind from the most critical direction for this parameter. The individual maximums specified may not occur simultaneously. All forces are referenced to the mounting pipe.

Maximum forces exerted on a supporting structure as a result of wind from the most critical direction for this parameter. The individual maximums specified may not occur simultaneously. All forces are referenced to the mounting pipe.
