

DAC6000 | Digital Addressable Controller DAC6000

Base Product

Digital Addressable Controller providing secured access control for digital video distribution systems.

- Configures headend components
- Schedules services and programs
- Defines channel map assignments
- Configures terminal communications, antitaping and code download
- Generates reports

The DAC6000 provides secured access control for digital video distribution systems. It supports a wide variety of addressable functions, including IPPV, Call Ahead PPV, subscription authorizations and interactive applications. Most service provider billing systems are compatible through the WireLink protocol.

Other supported functions include: detailed reporting to facilitate system management, virtual channel maps and control of encryption devices.

Based on a robust PC platform, DAC6000 system elements manage a powerful relational database system. A UPS system is included in the standard configuration to ensure an orderly shutdown of the system during power outages.
